Bandung

Mid-level Hybrid Mobile Engineer with 4+ years of experience building scalable, high-performance Flutter & ReactNative applications for fintech, corporate, and consumer markets. Proven track record in optimizing app performance, reducing load times, and delivering user-centric features. Skilled in clean code practices, state management, and cross-functional collaboration.

Pengalaman Kerja

PT. Gajah Nusantara Raya - Bogor, Indonesia

2025.09

Mobile Application Developer

PT Gajah Nusantara Raya is an Indonesian enterprise specializing in the distribution of consumer and commercial products while delivering innovative digital solutions in the financial technology industry. The company operates through three primary business segments: wholesale distribution, data management services, and digital investment platforms, providing technology-driven solutions to support business operations and customer engagement.

- Developed and maintained multiple cross-platform mobile applications using Flutter to support the company's operational and business processes.
- Built the Strade application, a technology-driven platform that supports internal operations and futures trading advisory services.
- Developed the Marketplace Satu Agen platform to simplify cooperative transactions and improve marketplace management.
- Created the Satu Ekspedisi application to support logistics operations, shipment management, and real-time delivery tracking.
- Developed the Driver application, enabling drivers to receive delivery assignments, access navigation, update job statuses, and submit work reports.
- Developed the User application, allowing customers to place service orders, monitor transaction status, and manage their accounts.
- Collaborated with UI/UX designers, backend engineers, operations teams, and stakeholders to analyze business requirements, design solutions, and deliver new features.
- Integrated RESTful APIs, authentication services, and local storage to ensure seamless communication between mobile applications and backend systems.
- Optimized application performance, resolved bugs, and performed regular maintenance to improve stability, responsiveness, and user experience.
- Participated in the complete software development lifecycle, including requirement analysis, implementation, testing, deployment, and post-release support.
- Technologies: Flutter, Dart, GetX, BLoC, REST API, JSON, Firebase, Git, GitHub, Android Studio, Cursor, Postman, Figma.
